Gitesh Sutar

Java Backend Developer

Professional Summary

Dynamic Java developer skilled in backend technologies like Java, Spring Boot, and Hibernate. Collaborative problem-solver with a proven ability to design and develop high-quality server-side applications. Strong in analyzing and debugging complex issues. Excellent communication and teamwork skills. Proactive and self-motivated with a passion for staying updated with emerging technologies.

Projects

Online Customer Service Support   Live Demo Link   Github Repo Link

Java   Hibernate   Maven   Spring Boot   MySQL

- Designed and implemented APIs for user authentication (login, signup, password change) using *Java*, *Hibernate*, *Maven*, and *Spring Boot*.
- Developed functionalities for viewing issues and fetching all issue data.
- Implemented features to reopen resolved issues for further action and resolution.

Starsync   Live Demo Link   Github Repo Link

Angular   MySQL   Flask

- Designed and developed a project management system using Angular and Flask technologies
- Implemented user roles (Admin, Project Manager, Team Member) with role-specific capabilities
- Secured user login process with access tokens for authenticated users
- Designed and maintained MySQL database for data integrity and optimal performance

Astra Bank   Live Demo Link   Github Repo Link

Java   Spring Boot   Spring Security   JWT   HTML
CSS   JavaScript   MySQL   Hibernate

- Developed a user-friendly banking application using Java and Spring Boot
- Implemented features for card management, transaction tracking, and profile management
- Integrated Spring Security and JWT for authentication and authorization
- Utilized MySQL and Hibernate for efficient data storage and retrieval
- Designed and built a responsive frontend using HTML, CSS, and JavaScript
